

Since 1885, We've Created the World's Most
Trusted Respiratory Protection Products.

Avon-ISI

Now Let's Talk About Your Next Fire.

Introducing the Avon-ISI **VIKING Z SEVEN**

Avon-ISI's Viking platform of SCBAs began setting the industry standard for innovation when first introduced in 1999 by including features like the in-mask Heads-Up Display and the patented AirSwitch® regulator and RDV facemasks, which were driven by the same philosophy we still hold today: keep it simple to use and maintain, and ensure it's comfortable to wear and operate.

When you compare the 2007 NFPA compliant Z Seven to every other SCBA on the market, you'll quickly see why the Z Seven is clearly a better SCBA. You'll find it loaded with features that make it safer, easier to use and more comfortable to wear while significantly lowering your operating and maintenance costs.

The Viking Z SEVEN is Avon-ISI's latest SCBA advancement and is certified to NIOSH, CBRN, and NFPA 1981, 1982 and 2007 editions.

The Viking Z SEVEN features:

- A new proprietary wireless electronics package that extends battery life and reduces signal interference more effectively than Bluetooth technology.
- A new NFPA standard-meeting PASS device.
- A 2,000 event data logging system.
- A two-piece enclosed backframe to protect the pressure reducer, bell, and PASS alarm.
- An easy-to-use control console.
- An improved VAS (Voice Amplification System) that adjusts to ten different levels, with the setting automatically retained for future uses.

Avon + ISI Two Proven Leaders in Respiratory Protection Worldwide.

Since 1885 Avon Protection Systems has supplied innovative respirator products to the world's military, paramilitary and police forces, first responders and emergency services. Avon is an acknowledged world leader in the field of CBRN respiratory protective equipment and is a division of Avon Rubber p.l.c., Melksham, U.K. with manufacturing facilities in the United Kingdom and United States. Avon acquired ISI in 2005 and Avon-ISI is now a division of Avon Rubber p.l.c.

Founded over 25 years ago in Lawrenceville, GA, Avon-ISI has always worked closely with firefighters, law enforcers, industrial safety managers and other

first responders to clearly understand and meet their changing respiratory protection needs. During this time, Avon-ISI has developed an exceptional range of high-performance and time-saving respiratory protection equipment as well as thermal imaging cameras that employ the most advanced features in the industry. With a long-standing commitment to quality, Avon-ISI has been ISO9001 certified since 1998 and every product is backed by world-class training, service and repair – all provided by some of the industry's most knowledgeable experts, from engineering and production to technical support and customer service.

Z Seven

ALL SCBAs ARE NOT

Patented AirSwitch® Facemask

Makes it easy for firefighters to instantly switch from ambient air to cylinder air, which helps conserve their air supply. Simply push down the slide on the front of the mask to activate cylinder air or push the slide up for ambient air.

Ten-Level Voice Amplification System

With ten sensitivity levels, firefighters can customize the VAS to their voice and situation. Raising the microphone sensitivity level reduces breathing interference without compromising communications. Simply push two buttons on the easy access console to change the voice level to your ideal personal setting and it will be saved for future uses.

All-In-One Control Console

The Z Seven control console houses the complete electronics package including Heads-Up Display processing, radio communications, PASS motion sensor and VAS, which are protected by a waterproof housing. Plus, software updates can be programmed wirelessly in under three minutes.

T CREATED EQUAL.

Better Wireless Solution & Longer Battery Life

The Z Seven utilizes a new, proprietary wireless technology ideally suited for handling lower data rates common with SCBAs. It uses much less power to communicate between the console and the PASS alarm. Plus, the PASS is sealed within the backframe with a solid-state motion sensor to eliminate false alarms and further reduce alarm and power demands. This design also has very low maintenance costs and comes ready to accommodate future advancements such as on-board GPS upgrades.

Original Two-Piece Backframe

This new design not only better protects vital components like the PASS alarm, pressure reducer, end-of-service alarm bell and buddy breather hose in an enclosed compartment to reduce hose entanglements, but it also requires significantly less maintenance.
